

Duna-R Kft. was incorporated in 1995 and it is a 100% Hungarian family owned company.

The company is dedicated to the breeding of hybrid varieties of culinary and spice peppers. Seeds of these varieties are sold in Hungary and exported to more than 15 countries. The company currently has 78 varieties of state-approved peppers registered.

We use the highest technology in breeding and seed processing. Breeding is carried out in our Experimental Garden in Szentes, seed processing and sales are carried out at our headquarters in Budapest.

A small part of seed production is carried out in Hungary, the majority in foreign countries.

We have contracts with several universities in Hungary from which we welcome students for their internships.

Our most recent achievement in sweet pepper breeding is the application for state certification of the varieties „Hajnaltáj F₁” and „Pirkadat F₁”. These varieties have Bs2 resistance and are suitable for mechanical harvesting.

In culinary white TV peppers, Zentus F₁ and Kobalt F₁ are our newest varieties. They have resistance to L3, TMV, CMV and Lt. The world's first white TV peppers with such a high resistance complex were produced.

Our Zentus F₁, Kobalt F₁, Hajnaltáj F₁, Pirkadat F₁ and Frodo F₁ varieties were honoured at the Agricultural Innovation Grand Prix.

Our future plans include increasing the productivity of peppers by 45-50% compared to current levels. The best chance of doing this is with new plants created by mutations. Results are expected within 1-2 years. As a result, it will be possible to harvest the peppers more economically in the production facilities with less human labour.

Statistical data:

- Number of employees: 21
- Net revenue: 1 701 000 Euro
- Total area of the sites in Szentes: 2,8 ha
